Young and New Worker Orientation

A young worker walks into a medical clinic, and the physician greets him. The physician takes the young worker on a tour of the clinic.

[Narration]

Every worker deserves to feel safe and supported from their first day on the job.

Before a young or new worker begins working, employers must provide health and safety orientation and training specific to the workplace.

A good orientation plan helps workers understand workplace hazards, safety procedures, and where to get help when they need it.

Start this section with our Young or New Worker Orientation checklist to make sure you are setting up your new employee for success.
