Emergency Drill Evaluation

Emergency drills must be conducted at least **once a year** to ensure staff are familiar with exit routes and procedures. A record of each drill must be maintained.

Records should be kept of inspections, maintenance, and testing of safety devices, like fire alarms, panic buttons, emergency lights, and related equipment.

Clinic name:					
Type of drill: (e.g., fire, earthquake, lockdown, etc.)	Drill coordinator:	:		Drill participants:	
,,					
Total time to evacuate:					
Evacuation procedure	Yes	No N/A	Comments		
Was the emergency alarm/ clearly heard throughout th	signal e clinic?				
Were evacuation routes use correctly by all participants					
Were there any obstruction blocked exits?	ns or				
Did all occupants evacuate	?				
Did any staff members or p require special assistance?	atients				
Were any safety issues encountered during the dril	II?				
Notes and actions:					
					Continued overleaf

Notes and actions:								
In case of a fire drill	Voc	No	NI/A	Commonts				
Clinic occupants	Yes	No	N/A	Comments				
Internal doors closed.								
Clinic equipment turned off/unplugged.								
Fire Marshal duties	Yes	No	N/A	Comments				
Assist with clinic evacuation.								
Direct occupants to Emergency Muster Point.								
Fire system and related equipment		No	N/A	Comments				
Fire department notified if testing system.								
Test alarm system.								
Fire alarm(s) functioning.								
Smoke detector(s) in good working order (batteries are replaced every two years and detectors are replaced every 10 years).								
Fire extinguishers in good working order checked with tags attached.
