Biological, Chemical, and Radiation Hazards

Medical office staff taking steps to protect themselves from biological, chemical, and radiation hazards.

[Narration]

Managing everyday hazards including biological, chemical, and radiation risks is a critical part of your workplace health and safety plan.

These hazards can harm staff through infection, exposure to chemicals, or radiation from medical equipment.

Clinics can quickly set up health and safety plans so that staff are trained and protected when working with hazardous materials.

Customize our ready-to-use tools, including:

- **A PPE policy and procedures template and factsheet.**
- **Hazardous materials poster.**
- **Safe work practices when using liquid nitrogen, compressed gas, and urine dipstick.**
- **And exposure control plans for biological hazards and ionizing radiation.**
